1. When you divide 86 by 4 there is a remainder of 2. Model this problem with number disks. In the number disk model, how can you see that there is a remainder?

2. Francine says that 86 ÷ 4 is 20 with a remainder of 6. She reasons it is correct because (4 × 20) + 6 = 86. What mistake has Francine made? Explain how she can correct her work.

3. The number disk model is showing 67 ÷ 4. Complete the model. Explain what happens to the 2 tens that are remaining in the tens column.
4. Two friends share 76 blueberries.
   a. To count the blueberries, they have already put them into small bowls of 10. Draw a picture to show
      how the blueberries can be shared equally. Will they have to split apart any of the bowls of 10
      blueberries when they share them?

   b. Explain how the friends can share the blueberries fairly.

5. Imagine you are drawing a comic strip showing how to solve the problem 72 ÷ 4 to new fourth graders.
   Create a script to explain how you can keep dividing after getting a remainder of 3 tens in the first step.
1. Maria solved the following division problem by drawing an area model.
   a. Look at the area model. What division problem did Maria solve?
   
   \[
   \begin{array}{c|c}
   & 10 \\
   3 & 30 \\
   \end{array}
   \]

   \[
   \begin{array}{c|c}
   & 8 \\
   3 & 24 \\
   \end{array}
   \]

   \[3 \times \frac{30}{9} + \frac{24}{9} = 10 + 8 = 18\]

   b. Show a number bond to represent Maria’s area model. Start with the total and then show how the total is split into two parts. Below the two parts, represent the total length using the distributive property and then solve.

   \[
   \begin{array}{c}
   42 \\
   \end{array}
   \]

   \[
   \begin{array}{c}
   30 \\

   \]

   \[

   24 \\
   \end{array}
   \]

   \[
   (\_\_\_ \div \_\_\_) + (\_\_\_ \div \_\_\_) = \_\_\_ + \_\_\_ = \_\_\_\]

2. Solve 42 ÷ 3 using an area model. Draw a number bond and use the distributive property to solve for the unknown length.
3. Solve $60 \div 4$ using an area model. Draw a number bond to show how you partitioned the area, and represent the division with a written method.

      $= \_\_ \times 15$
      
      $= \_\_  

3. In class, we used the associative property to show that when 6 is a factor, then 2 and 3 are factors, because $6 = 2 \times 3$. Use the fact that $10 = 5 \times 2$ to show that 2 and 5 are factors of 70, 80, and 90.
   
   $70 = 10 \times 7$
   
   $80 = 10 \times 8$
   
   $90 = 10 \times 9$

Lesson 37 Exit Ticket

1. Solve $43 \times 22$ using 4 partial products and 2 partial products. Remember to think in terms of units as you solve. Write an expression to find the area of each smaller rectangle in the area model.

   $\begin{array}{c}
   \times \quad 4 \quad 3 \\
   22 \quad 2 \quad 2
   \end{array}$

   - $3 \text{ ones} \times 2 \text{ ones}$
   - $3 \text{ ones} \times 2 \text{ tens}$
   - $4 \text{ tens} \times 2 \text{ ones}$
   - $4 \text{ tens} \times 2 \text{ tens}$

2. Solve the following using 2 partial products.

   $\begin{array}{c}
   \times \quad 4 \quad 3 \\
   6 \quad 4 \quad 2 \quad 2
   \end{array}$

   - $5 \text{ ones} \times 64 \text{ ones}$
   - $1 \text{ ten} \times 64 \text{ ones}$
Solve using the multiplication algorithm.

1.

\[
\begin{array}{c}
\times \\
7 2 \\
\times \\
4 3 \\
\hline
\end{array}
\]

\[
\begin{array}{c}
\_ \times \_ \\
\_ \times \_ \\
\_ \times \_ \\
\hline
\end{array}
\]

2. \(35 \times 53\)
