

Name _____ Per _____

LO: I can determine whether or not SAS is a shortcut that is sufficient to prove that two triangles are congruent and can describe a sequence of transformations that maps a triangle to another triangle.

DO NOW On the back of this packet

(1) Rigid Transformations, which are _____, _____, and _____ preserve _____ and _____.

(2) Congruence: A sequence of transformations (remix)

transparencies, dry erase markers, eraser, compass, straightedge

To verify that a sequence (composition) of rigid transformations will map $\triangle ABC$ to $\triangle A'B'C'$, we will work backwards.

Map point _____ to _____ by _____ triangle $A'B'C'$ _____ so that _____ coincides with _____. Your transformation should result in a diagram that looks like the one below.

Next, map point _____ to _____ by _____ triangle $A''B''C''$ _____ so that _____ coincides with _____. We know that both points will coincide because $\overline{AC} \cong$ _____. Your transformation should result in a diagram that looks like the one below.

Finally, map _____ to _____ by _____ triangle $A'''B'''C'''$ _____ so that _____ coincides with _____. We know that both points will coincide because (1) angle _____ maps to angle _____ under reflection which means that ray _____ will lie on ray _____, (2) points _____ and _____ lie on the same ray and are the same distance from point A so point _____ maps to point _____.

So, what does this mean for us? Well, if we need to show that 2 triangles are congruent, do we have to show that all three pairs of corresponding sides AND all three pairs of corresponding angles are congruent? _____ In fact, this process shows us that all we need is _____ pairs of _____ and _____ pair of _____. The pair of _____ must be between the pairs of congruent _____. To abbreviate this method of proving triangles are congruent, we write $SAS \cong$ which is short for saying **S** _____ **A** _____ **S** _____ \cong _____.

Is SAS enough to prove/guarantee 2 triangles are congruent? _____

- (3) (a) Given: $\angle A \cong \angle I$, $\overline{EA} \cong \overline{WI}$, $\overline{AR} \cong \overline{IG}$

Do $\triangle EAR$ and $\triangle WIG$ meet the SAS \cong criteria? _____

Mark the diagram and provide evidence below.

S _____ because _____

A _____ because _____

S _____ because _____

The angle is/is not (circle one) between the sides.

- (b) Describe a sequence of transformations that map $\triangle EAR$ to $\triangle WIG$ and sketch each step of the transformation. Identify necessary points, lines, vectors, angles to complete the transformation.

(4) Given: $\angle LMN \cong \angle LNO$, $\overline{MN} \cong \overline{ON}$

Do $\triangle LMN$ and $\triangle LON$ meet the SAS \cong criteria? _____

Mark the diagram and provide evidence below.

S _____ because _____

A _____ because _____

S _____ because _____

The angle is/is not (circle one) between the sides.

Describe a sequence of transformations that map $\triangle LMN$ to $\triangle LON$ and sketch each step of the transformation.

Identify necessary points, lines, vectors, angles to complete the transformation.

(5) Given: $\angle HGI \cong \angle JIG$, $\overline{HG} \cong \overline{JI}$

Do $\triangle HGI$ and $\triangle JIG$ meet the SAS \cong criteria? _____

Mark the diagram and provide evidence below.

S _____ because _____

A _____ because _____

S _____ because _____

The angle is/is not (circle one) between the sides. (If not, choose a different A)

Describe a sequence of transformations that map $\triangle HGI$ to $\triangle JIG$ and sketch each step of the transformation.

Identify necessary points, lines, vectors, angles to complete the transformation.

□ (6) □ Given: $\overline{AB} \parallel \overline{CD}$, $\overline{AB} \cong \overline{CD}$

(Hint: Parallel lines give us pairs of congruent angles. Are there any here?)

Do $\triangle ABD$ and $\triangle CDB$ meet the $SAS \cong$ criteria? _____

Mark the diagram and provide evidence below.

S _____ because _____

A _____ because _____

S _____ because _____

The angle is/is not (circle one) between the sides.

Describe a sequence of transformations that map $\triangle ABD$ to $\triangle CDB$ and sketch each step of the transformation.

Identify necessary points, lines, vectors, angles to complete the transformation.

(7) **Exit Ticket**

ON THE LAST PAGE

 (8) **Homework**
 (1) Given: The diagram at right

 Do $\triangle BOW$ and $\triangle MAN$ meet the SAS \cong criteria? _____

Mark the diagram and provide evidence below.

S _____ because _____

A _____ because _____

S _____ because _____

The angle is/is not (circle one) between the sides.

 Describe a sequence of transformations that map $\triangle BOW$ to $\triangle MAN$ and sketch each step of the transformation.

Identify necessary points, lines, vectors, angles to complete the transformation.

(8) **Homework**
cont.

(2) Given: The diagram at right

Do $\triangle MAN$ and $\triangle JOB$ meet the SAS \cong criteria? _____

Mark the diagram and provide evidence below.

S _____ because _____

A _____ because _____

S _____ because _____

The angle is/is not (circle one) between the sides.

Describe a sequence of transformations that map $\triangle MAN$ to $\triangle JOB$ and sketch each step of the transformation.

Identify necessary points, lines, vectors, angles to complete the transformation. Write the sequence in function notation. Write a justification in sentences.

Exit Ticket Name _____ Date _____ Per _____

10.3L

(1) The LO (Learning Outcomes) are written below your name on the front of this packet. Demonstrate your achievement of these outcomes by doing the following:

Describe a sequence of transformations that will map $\triangle ABC$ to $\triangle XYZ$. Sketch each single transformation in the sequence. You may want to use tracing paper to help you visualize the transformations.

DO NOW Name _____ Date _____ Per _____

10.3L

(1) If $\triangle ABC$ maps to $\triangle XYZ$, then

angle C would coincide with _____

segment CA would coincide with _____

and segment CB would coincide with _____.

(2) Which horizontal segment is longer, the one in the top figure, or the one in the bottom figure? How do you know?
