

Name _____ Per _____

LO: I can solve problems involving diameters and chords.

 DO NOW On the back of this packet (1) **Circles: chord and diameter relationship**

Use the website link for 10.7 (see below or use the QR code at right) to investigate the relationship between chord midpoints and diameters.

<http://tube.geogebra.org/m/sTestGMm?doneurl=%2Fsearch%2Fperform%2Fsearch%2Fchord%2Bdiameter>

- (a) Construct the perpendicular bisector of \overline{WT} and label the intersections with the circle R and S. Label the intersection of \overline{WT} and \overline{RS} with a Q.

- (b) \overline{RS} is a _____ of circle O. The perpendicular bisector of ANY chord in a circle is a _____ of the circle.
- (c) If we know that a diameter bisects a chord, then it must also be _____ to the chord. If we know that a diameter is perpendicular to a chord, then it must also _____ the chord.

(1) (d) Prove the **CHORD DIAMETER THEOREM** which are your statements in part C. Mark each diagram cont. provided as you write/assemble your proof.

If a diameter (\overline{RS}) bisects a chord (\overline{WT}), then the diameter is perpendicular to the chord	
I know that . . .	because . . .
diameter \overline{RS} bisects a chord \overline{WT}	
$\overline{WQ} \cong \overline{TQ}$	
$\overline{OQ} \cong \overline{OQ}$	
Auxiliary segments $\overline{OW} \cong \overline{OT}$	
$\triangle WOQ \cong \triangle TOQ$	
$\angle WQO \cong \angle OQT$ and both are 90°	
$\overline{WT} \perp \overline{RS}$	

If a diameter (\overline{RS}) is perpendicular to a chord (\overline{WT}), then the diameter bisects the chord	
I know that . . .	because . . .
diameter \overline{RS} is perpendicular to a chord \overline{WT}	
$\angle WQO \cong \angle OQT$ and both are 90°	
$\overline{OQ} \cong \overline{OQ}$	
Auxiliary segments $\overline{OW} \cong \overline{OT}$	
$\triangle WOQ \cong \triangle TOQ$	
$\overline{WQ} \cong \overline{TQ}$	
diameter \overline{RS} bisects chord \overline{WT}	

(e) In your proof, you added radii to your diagram and formed 2 triangles. What kind of triangles were formed? _____ What formula can you use to find unknown side lengths of _____ triangles? _____

(2) Find x in each diagram. Adding a radius or other segment to the diagram may be helpful.

(a)

(b)

(2) Review:

- 64 A shipping container is in the shape of a right rectangular prism with a length of 12 feet, a width of 8.5 feet, and a height of 4 feet. The container is completely filled with contents that weigh, on average, 0.25 pound per cubic foot. What is the weight, in pounds, of the contents in the container?

- 1 1,632
- 2 408
- 3 102
- 4 92

- 10 Given \overline{MN} shown below, with $M(-6, 1)$ and $N(3, -5)$, what is an equation of the line that passes through point $P(6, 1)$ and is parallel to \overline{MN} ?

- 1 $y = -\frac{2}{3}x + 5$
- 2 $y = -\frac{2}{3}x - 3$
- 3 $y = \frac{3}{2}x + 7$
- 4 $y = \frac{3}{2}x - 8$

Exit Ticket Name _____ Date _____ Per _____ 10.7R

The LO (Learning Outcomes) are written below your name on the front of this packet. Demonstrate your achievement of these outcomes by doing the following:

(1) Find the indicated measure for each diagram. Show sufficient evidence of your solution

(a) $x =$ _____

(b) $x =$ _____

(1)

- 5 Using a straightedge and compass, construct a square inscribed in circle O below. [Leave all construction marks.]

Determine the measure of the arc intercepted by two adjacent sides of the constructed square. Explain your reasoning.
