

(DN) We have discussed 5 types of angles. List the 5 types of angles and make a sketch for each. (these are in your notes)

Name \_\_\_\_\_ Per \_\_\_\_\_

SLO: I can identify **angle relationships** involving adjacent and vertical angles and use the relationships to solve for unknown values .

(1) **Angles: What we know**

What do we know about angles already?

(a) The number of degrees around a point is \_\_\_\_\_.

(b) If four angles with measures  $a, b, c,$  and  $d$  are **adjacent angles** around a point, then the sum of the angles  $(a + b + c + d)$  is \_\_\_\_\_.

(c) The number of degrees in a **straight angle** is \_\_\_\_\_.

(d) If a straight angle is formed by two **adjacent angles**, the angles are called a \_\_\_\_\_. Add a ray to the diagram below to form a linear pair. The sum of the two angles is \_\_\_\_\_. When the sum of two angles is \_\_\_\_\_ the angles are \_\_\_\_\_.

(2) **Angles: Using relationships**

transparencies, dry erase markers, erasers

Use what you have stated in problem number 1 to find the measure of each unknown angle. Write an equation and solve it.

(a) Determine the measure of angle  $g$ .

$m\angle g =$  \_\_\_\_\_ because \_\_\_\_\_

\_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

(b) Determine the measure of angle  $f$ .

$m\angle f =$  \_\_\_\_\_ because \_\_\_\_\_

\_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

(3) **Angles: Vertical Angles**

Use what you have stated in problem number 2 to find the measure of each unknown angle. Write an equation and solve it.

$m\angle a = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$m\angle b = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$m\angle c = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$m\angle d = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$m\angle e = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

Focus on the diagram with angles  $b$ ,  $c$ , and  $d$  in problem number 3.

(a) Complete the equations:  $b + 40 = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$d + 40 = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$b = d$  because  $\underline{\hspace{2cm}}$

(b) Angles  $b$  and  $d$  are called **vertical angles**. **Vertical angles** always have  $\underline{\hspace{2cm}}$  angle measures.

(c) Describe how you can recognize **vertical angles** in a diagram  $\underline{\hspace{2cm}}$

Use what you have learned above to find the measure of  $h$ .

$m\angle h = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

(4) **Angles: Use relationships to solve problems**

Write an equation and solve for each variable. State a relationship you used to write the equation for each explanation. You MUST do at least 8 of the 13 problems. Finish for homework what you don't finish in class.

(a)

$d = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

(b)

$c = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

(4) **Angles: Use relationships to solve problems**

cont.

 (c)

$x = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

 (d)

$x = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

$y = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

 (e)

$x = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

 (f)

$g = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

 (g)

$x = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

$y = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

 (h)

$x = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

$y = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

(4) Angles: Use relationships to solve problems

cont.

 (i)

$a = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

 (j)

$b = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

 (k)

$x = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

$y = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

 (l)

$x = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

$y = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

 (m)

$x = \underline{\hspace{2cm}}$  because  $\underline{\hspace{2cm}}$

$\underline{\hspace{2cm}}$

(5) **Exit Ticket**

Find the measures of  $a$  and  $c$ . Show equations and explain your work.

$a =$  \_\_\_ because \_\_\_\_\_

$c =$  \_\_\_ because \_\_\_\_\_

 (6) **Homework** Complete all parts of problem number 4
