

5.1

Name (print first and last) \_\_\_\_\_ Per \_\_\_\_\_ Date: 12/9 due 12/11

5.1 Congruence

Geometry Regents 2013-2014 Ms. Lomac

SLO: I can determine whether or not two triangles can be proven congruent by SAS.

(1)  In the diagram, the triangles are labeled  $\triangle ABC$  and  $\triangle A'B'C'$ . This means that  $\triangle A'B'C'$  is an \_\_\_\_\_ of  $\triangle ABC$  under a transformation or composition of transformations. Today you will check to see that the triangles are congruent by verifying that a sequence (composition) of rigid transformations will map  $\triangle ABC$  to  $\triangle A'B'C'$  by working backwards. To do that, we will have to transform point A' so that it coincides with \_\_\_\_\_, B' so that it coincides with \_\_\_\_\_ and C' so it coincides with \_\_\_\_\_.

Start by constructing a translation of  $\triangle A'B'C'$ , so that A' coincides (is in the same location) with A. Label your triangle A''B''C''. Hmmmm..... What vector should we use? \_\_\_\_\_ (well, we are sliding A' to A, so . . .)

Your construction should result in a diagram that looks like the one below. To continue the process of mapping  $\triangle A'B'C'$  back to  $\triangle ABC$ , we should \_\_\_\_\_ triangle A''B''C'' around point \_\_\_\_\_ so that C'' \_\_\_\_\_ with \_\_\_\_\_ and A'' \_\_\_\_\_ with \_\_\_\_\_. We know that both points will coincide because  $\overline{AC} \cong \overline{A''C''}$ . Once you have transformed C'', you can use the angle on the right to help you rotate B'', because of course B'' must also rotate.

5.1

$A''$  is just labeled A in the diagram below because the 2 points \_\_\_\_\_. The other 2 points that coincide are \_\_\_\_\_ and \_\_\_\_\_. So, we just need to get  $B''$  to coincide with \_\_\_\_\_. It looks like  $B''$  will map to \_\_\_\_\_ if we \_\_\_\_\_  $\triangle AB''C$  across \_\_\_\_\_, BUT, can we be SURE that B and  $B''$  will coincide?!?

B and  $B''$  are on rays that coincide because  $\angle$  \_\_\_\_\_  $\cong$   $\angle$  \_\_\_\_\_ and \_\_\_\_\_ preserves \_\_\_\_\_. B and  $B''$  must \_\_\_\_\_ after reflection because (1) they are on rays that \_\_\_\_\_, (2)  $\overline{AB''} \cong$  \_\_\_\_\_ so B and  $B''$  are equidistant from point A, and (3) \_\_\_\_\_ preserves \_\_\_\_\_, so B and  $B''$  are the same distance from vertex A. Therefore, B and  $B''$  MUST coincide.

So, what does this mean for us? Well, if we need to show that 2 triangles are congruent, do we have to show that all three pairs of corresponding sides AND all three pairs of corresponding angles are congruent? \_\_\_\_\_. In fact, this process shows us that all we need is \_\_\_\_\_ pairs of \_\_\_\_\_ and \_\_\_\_\_ pair of \_\_\_\_\_. The pair of \_\_\_\_\_ must be between the pairs of congruent \_\_\_\_\_. To abbreviate this method of proving triangles are congruent, we write **SAS** $\cong$  which is short for saying **S** \_\_\_\_\_ **A** \_\_\_\_\_ **S** \_\_\_\_\_  $\cong$  \_\_\_\_\_.

(2)  Given:  $\angle LMN \cong \angle LNO$ ,  $\overline{MN} \cong \overline{ON}$

Do  $\triangle LMN$  and  $\triangle LNO$  meet the SAS $\cong$  criteria? \_\_\_\_\_ Provide evidence.

S \_\_\_\_\_ because \_\_\_\_\_

A \_\_\_\_\_ because \_\_\_\_\_

S \_\_\_\_\_ because \_\_\_\_\_

The angle is/is not (circle one) between the sides.

(3)  Given:  $\angle HGI \cong \angle JIG$ ,  $\overline{HG} \cong \overline{JI}$

Do  $\triangle HGI$  and  $\triangle JIG$  meet the SAS $\cong$  criteria? \_\_\_\_\_ Provide evidence.

S \_\_\_\_\_ because \_\_\_\_\_

A \_\_\_\_\_ because \_\_\_\_\_

S \_\_\_\_\_ because \_\_\_\_\_

The angle is/is not (circle one) between the sides. (If not, choose a different A)

5.1

(4)  Given:  $\overline{AB} \parallel \overline{CD}$ ,  $\overline{AB} \cong \overline{CD}$  (Hint: Parallel lines give us pairs of congruent angles. Are there any here?)

Do  $\triangle ABD$  and  $\triangle CDB$  meet the SAS  $\cong$  criteria? \_\_\_\_\_ Provide evidence.

S \_\_\_\_\_ because \_\_\_\_\_  
 A \_\_\_\_\_ because \_\_\_\_\_  
 S \_\_\_\_\_ because \_\_\_\_\_

The angle is/is not (circle one) between the sides.

(5)  Given:  $m\angle R = 25^\circ$ ,  $RT = 7''$ ,  $SU = 5''$ ,  $ST = 5''$  (Hint: Isosceles Triangle Theorem from 4.5 notes. Highlighters could help here.)

Do  $\triangle RSU$  and  $\triangle RST$  meet the SAS  $\cong$  criteria? \_\_\_\_\_ Provide evidence.

S \_\_\_\_\_ because \_\_\_\_\_  
 A \_\_\_\_\_ because \_\_\_\_\_  
 S \_\_\_\_\_ because \_\_\_\_\_

The angle is/is not (circle one) between the sides.

(6)  Given:  $\overline{KM}$  and  $\overline{JN}$  bisect each other. (Hint: What do we get when a segment is bisected?)

Do  $\triangle JKL$  and  $\triangle NML$  meet the SAS  $\cong$  criteria? \_\_\_\_\_ Provide evidence.

\_\_\_\_\_ because \_\_\_\_\_  
 \_\_\_\_\_ because \_\_\_\_\_  
 \_\_\_\_\_ because \_\_\_\_\_

The \_\_\_\_\_

(7) Given:  $\overline{AE}$  bisects  $\angle BCD$ ,  $\overline{BC} \cong \overline{DC}$ . (Hint: What do we get when an angle is bisected? WHICH angle is bisected?)

Do  $\triangle CAB$  and  $\triangle CAD$  meet the SAS  $\cong$  criteria? \_\_\_\_\_ Provide evidence.

\_\_\_\_\_ because \_\_\_\_\_  
 \_\_\_\_\_ because \_\_\_\_\_  
 \_\_\_\_\_ because \_\_\_\_\_

The \_\_\_\_\_

5.1

(8)  Given:  $\overline{SU}$  and  $\overline{RT}$  bisect each other (Hint: What does bisect mean again? Soooo many segments and angles, where are my highlighters?!)

Do  $\triangle SVR$  and  $\triangle UVT$  meet the SAS  $\cong$  criteria? \_\_\_\_\_ Provide evidence.

---

---

---

---

---

---

(9)  Given:  $\overline{JM} \cong \overline{KL}$ ,  $\overline{JM} \perp \overline{ML}$ ,  $\overline{KL} \perp \overline{ML}$  (Hint: What does that upside-down T mean? Highlighters, save me from this visual confusion.)

Do  $\triangle JML$  and  $\triangle KML$  meet the SAS  $\cong$  criteria? \_\_\_\_\_ Provide evidence.

---

---

---

---

---

---

(10)  Given:  $\overline{BF} \perp \overline{AC}$ ,  $\overline{CE} \perp \overline{AB}$  (Hint: What does that upside-down T mean? Highlighters, where would I be without highlighters?)

Do  $\triangle BED$  and  $\triangle CFD$  meet the SAS  $\cong$  criteria? \_\_\_\_\_ Provide evidence.

---

---

---

---

---

---

(11)  Given:  $\angle VXY \cong \angle VYZ$ . (Hint: Highlight, highlight, highlight.)

Do  $\triangle VXW$  and  $\triangle VYZ$  meet the SAS  $\cong$  criteria? \_\_\_\_\_ Provide evidence.

---

---

---

---
