Name (print first and last) \_\_\_\_\_

Per \_\_\_\_\_ Date: 12/13 due 12/15

5.2 Congruence

Geometry Regents 2013-2014 Ms. Lomac

SLO: I can use SAS≅ to prove the isosceles triangle theorem.

(1) □ Prove: If a triangle is isosceles then the base angles are congruent.

① I am given \_\_\_\_\_.  
*(Label the triangle with letters and mark congruent parts based on definitions.)*

② Side \_\_\_\_\_ ≅ \_\_\_\_\_ because Δ\_\_\_\_\_ is \_\_\_\_\_.  
*(What congruent parts did you mark?)*

③ I can construct auxiliary line segment \_\_\_\_\_ that bisects the vertex angle → ∠\_\_\_\_\_.  
*(Where is the vertex angle? What does bisect mean? The segment needs a letter where it intersects the base of the triangle.)*

④ ∠ \_\_\_\_\_ ≅ ∠ \_\_\_\_\_ because segment \_\_\_\_\_ is the \_\_\_\_\_ of \_\_\_\_\_.  
*(Should you have congruent angles from step 3? Where? Why? Do you have to name them with 3 letters? Mark this fact in the diagram.)*

⑤ \_\_\_\_\_ ≅ \_\_\_\_\_ because the segment is the same as itself (reflexive property)  
*(What segment is a side of both triangles? Mark this fact in the diagram.)*

⑥ Δ \_\_\_\_\_ ≅ Δ \_\_\_\_\_ because of \_\_\_\_\_ triangle congruence.  
*(Check your facts from steps 2, 4, and 5. Is that enough to prove the triangles are congruent? See lesson 5.1)*

⑦ \_\_\_\_\_ ≅ \_\_\_\_\_ because when triangles are congruent, all corresponding angle pairs and side pairs are \_\_\_\_\_. Since \_\_\_\_\_ and \_\_\_\_\_ are \_\_\_\_\_ and are \_\_\_\_\_ we can say that \_\_\_\_\_  
*(What were we trying to prove? What are the base angles?)*

5.2

(2)  Given:  $\overline{JK} \cong \overline{JL}$ ,  $\overline{JR}$  bisects  $\angle KJL$  Prove:  $\overline{JR} \perp \overline{KL}$

① I am given \_\_\_\_\_ AND \_\_\_\_\_.  
*(Mark congruent parts.)*

②  $\angle$  \_\_\_\_\_  $\cong$   $\angle$  \_\_\_\_\_ because \_\_\_\_\_ bisects \_\_\_\_\_.  
*(What was bisected? What does bisect mean? What congruent parts did you mark?)*

③ \_\_\_\_\_  $\cong$  \_\_\_\_\_ because the segment is the same as itself (reflexive property)  
*(What segment is a side of both triangles? Mark this fact in the diagram.)*

④ \_\_\_\_\_  $\cong$  \_\_\_\_\_ because of \_\_\_\_\_ triangle congruence.  
*(Check your facts from steps 1, 2, and 3. Is that enough to prove the triangles are congruent? See lesson 5.1)*

⑤ \_\_\_\_\_  $\cong$  \_\_\_\_\_ because when triangles are congruent, all corresponding angle pairs and corresponding side pairs are \_\_\_\_\_.  
*(What were we trying to prove? What angles will help us do that?)*

⑥ \_\_\_\_\_ + \_\_\_\_\_ =  $180^\circ$  because they are a linear pair.  
*(How can  $180^\circ$  help us get to  $90^\circ$ ?)*

⑦ \_\_\_\_\_ + \_\_\_\_\_ =  $180^\circ$  by substitution  
*(How can we put the information from steps 5 and 6 together?)*

⑧  $2(\text{_____}) = 180^\circ$  by combining like terms  
*(How can we use information from step 7 to help us get what we want for step 9?)*

⑨ \_\_\_\_\_ = \_\_\_\_\_  $^\circ$  by \_\_\_\_\_  
*(What kind of angles will help us get what we want in step 10?)*

⑩ \_\_\_\_\_  $\perp$  \_\_\_\_\_ because lines are \_\_\_\_\_ when they intersect at \_\_\_\_\_  $^\circ$  angles.  
*(What were we trying to prove? What type of angles will help us do that?)*

5.2

(3)  Given:  $\overline{AB} \cong \overline{AC}$ ,  $\overline{XB} \cong \overline{XC}$

Prove:  $\overline{AX}$  bisects  $\angle BAC$

① I am given \_\_\_\_\_ AND \_\_\_\_\_.  
 (Mark congruent parts.)

②  $\angle ABC \cong \angle$  \_\_\_\_\_ and  $\angle XBC \cong \angle$  \_\_\_\_\_ because base angles of \_\_\_\_\_.  
 (Refer to notes from lesson 4.5.)

③  $\angle ABX = \angle ABC - \angle$  \_\_\_\_\_ and  $\angle ACX = \angle$  \_\_\_\_\_ -  $\angle$  \_\_\_\_\_  
 because \_\_\_\_\_  
 (What equations can we write with the angles we know?)

④  $\angle ABC - \angle$  \_\_\_\_\_ =  $\angle$  \_\_\_\_\_ -  $\angle$  \_\_\_\_\_  
 because \_\_\_\_\_  
 Therefore  $\angle ABX = \angle ACX$   
 because \_\_\_\_\_  
 (What equations can we write with the angles we know?)

⑤  $\triangle$  \_\_\_\_\_  $\cong \triangle$  \_\_\_\_\_ because \_\_\_\_\_.  
 (Which angles must be congruent to prove that?)

⑥  $\angle$  \_\_\_\_\_  $\cong \angle$  \_\_\_\_\_ because when triangles are congruent, all corresponding angle pairs and corresponding side pairs are \_\_\_\_\_.  
 (What were we trying to prove? What angles will help us do that?)

⑦  $\overline{AX}$  bisects  $\angle$  \_\_\_\_\_ because when 2 adjacent angles are congruent, the larger angle formed by the two angles must have been cut in half (bisected).  
 (What does bisect mean? What evidence will show us that an angle is bisected?)

5.2

(4) □ Given:  $\overline{JX} \cong \overline{JY}$ ,  $\overline{KX} \cong \overline{LY}$  Prove:  $\triangle JKL$  is isosceles

① I am given \_\_\_\_\_ AND \_\_\_\_\_.  
 (Mark congruent parts.)

②  $\angle$  \_\_\_\_\_  $\cong$   $\angle$  \_\_\_\_\_ because base angles of an \_\_\_\_\_  
 \_\_\_\_\_ are \_\_\_\_\_.  
 (Refer to notes from lesson 4.5.)

③  $\angle$  \_\_\_\_\_ +  $\angle$  \_\_\_\_\_ = \_\_\_\_\_ and  $\angle$  \_\_\_\_\_ +  $\angle$  \_\_\_\_\_ = \_\_\_\_\_  
 because \_\_\_\_\_  
 (What angle relationships do you see with angles 1, 3, 2, and 4?)

④  $\angle$  \_\_\_\_\_ +  $\angle$  \_\_\_\_\_ =  $\angle$  \_\_\_\_\_ +  $\angle$  \_\_\_\_\_ because \_\_\_\_\_  
 Therefore  $\angle$  \_\_\_\_\_ =  $\angle$  \_\_\_\_\_ because \_\_\_\_\_  
 (Since angles 1 and 2 are equal, what can we do to simplify the equation? Mark the diagram.)

⑤  $\triangle$  \_\_\_\_\_  $\cong$   $\triangle$  \_\_\_\_\_ because \_\_\_\_\_.  
 (Which pair of triangles should we prove congruent to get the congruent segments we want?)

⑥ \_\_\_\_\_  $\cong$  \_\_\_\_\_ because when triangles are congruent, all corresponding angle pairs and corresponding side pairs are \_\_\_\_\_.  
 (What were we trying to prove? What segments will help us do that?)

⑦  $\triangle JKL$  is isosceles because it has \_\_\_\_\_ congruent sides, side \_\_\_\_\_ and side \_\_\_\_\_.  
 (What does isosceles mean? What evidence will show us that a triangle is isosceles?)

5.2

(5)  Given:  $\triangle ABC$  with  $\angle CBA \cong \angle BCA$

Prove:  $\overline{BA} \cong \overline{CA}$

① I am given \_\_\_\_\_.  
(Mark congruent parts.)

② Construct the perpendicular bisector of  $\overline{BC}$  and label the point of intersection D. Now,  $\angle$  \_\_\_\_\_ =  $\angle$  \_\_\_\_\_ = \_\_\_\_\_ $^\circ$  and \_\_\_\_\_  $\cong$  \_\_\_\_\_ because \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
(Refer to unit 2. What do we know when we have a perpendicular bisector? Mark this in your diagram)

③ When reflected across the perpendicular bisector, ray BA and ray \_\_\_\_\_ coincide because points B and \_\_\_\_\_ coincide and  $\angle B$  and  $\angle C$  are \_\_\_\_\_. Point A must be on the perpendicular bisector because the rays intersect at point \_\_\_\_\_ which means \_\_\_\_\_ must coincide with itself when the rays coincide. The only way for this to occur is if point A is on the \_\_\_\_\_  
(Does A have to be on the perpendicular bisector?)

④ \_\_\_\_\_  $\cong$  \_\_\_\_\_ because the segment is the same as itself (reflexive property)  
(What segment is a side of both triangles? Mark this fact in the diagram.)

⑤  $\triangle$  \_\_\_\_\_  $\cong$   $\triangle$  \_\_\_\_\_ because \_\_\_\_\_.  
(Which pair of triangles should we prove congruent to get the congruent segments we want?)

⑥ \_\_\_\_\_  $\cong$  \_\_\_\_\_ because when triangles are congruent, all corresponding angle pairs and corresponding side pairs are \_\_\_\_\_.  
(What were we trying to prove? Could we prove it if we had congruent triangles?)

5.2

(6)  $\square$  Given:  $\triangle ABC$ ,  $\overline{XY}$  bisects  $\angle BYA$  and  $\overline{BC} \parallel \overline{XY}$ ,

Prove:  $\overline{YB} \cong \overline{YC}$

① I am given \_\_\_\_\_.

②  $\angle \_\_\_ \cong \angle \_\_\_ \text{ because } \_\_\_\_\_\_$   
 \_\_\_\_\_  
 \_\_\_\_\_  
 (What does bisect mean? Mark the diagram.)

③  $\angle \_\_\_ \cong \angle \_\_\_ \text{ because } \_\_\_\_\_\_$   
 \_\_\_\_\_  
 \_\_\_\_\_  
 (What do we get out of parallel lines? Refer to notes from lesson 4.5. Mark the diagram.)

④  $\angle \_\_\_ \cong \angle \_\_\_ \text{ because } \_\_\_\_\_\_$   
 \_\_\_\_\_  
 \_\_\_\_\_  
 (What do we get out of parallel lines? Refer to notes from lesson 4.5. Mark the diagram.)

⑤ \_\_\_\_\_  $\cong$  \_\_\_\_\_ because \_\_\_\_\_  
 \_\_\_\_\_  
 (What congruent angles will help us prove that the segments are congruent?)

⑥ \_\_\_\_\_  $\cong$  \_\_\_\_\_ because \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_  
 (Can we prove that segments are congruent? Can we show that base angles of a triangle are congruent so we can get congruent sides?)

5.1 Exit Ticket Name \_\_\_\_\_ Per \_\_\_\_\_

Complete the statement. You may use diagrams to support your statement.

Given:  $\overline{AE}$  bisects  $\angle BCD$ ,  $\overline{BC} \cong \overline{DC}$ .

Do  $\triangle CAB$  and  $\triangle CAD$  meet the SAS  $\cong$  criteria? \_\_\_\_\_ Provide evidence.
