

7.2

Name (print first and last) _____ Per _____ Date: 3/4 due 3/5

7.2 Similarity: Relationships of side lengths

Geometry Regents 2013-2014 Ms. Lomac

SLO: I can identify corresponding sides and use them to write ratios and proportions.

VOCABULARY (use these words while you are answering questions)

Dilation (Notation D_k)	Segment	Length	Similar	Image
Coordinates	Direction	Congruent	Units	Original
Scale factor	Center of dilation	Origin	Proportional	

TO DO:

The lengths for problem #3 on the skill/task 7.1 similarity sheet are copied below in simplified radical form.

	AB	BC	CD	DE	EA
Original	1	$\sqrt{34} = \sqrt{34}$	6	2	$\sqrt{13} = \sqrt{13}$
'	2	$\sqrt{136} = 2\sqrt{34}$	12	4	$\sqrt{52} = 2\sqrt{13}$
"	3	$\sqrt{306} = 3\sqrt{34}$	18	6	$\sqrt{117} = 3\sqrt{13}$
'''	4	$\sqrt{544} = 4\sqrt{34}$	24	8	$\sqrt{208} = 4\sqrt{13}$
''''	5	$\sqrt{850} = 5\sqrt{34}$	30	10	$\sqrt{325} = 5\sqrt{13}$
'''''	6	$\sqrt{1224} = 6\sqrt{34}$	36	12	$\sqrt{468} = 6\sqrt{13}$

(1) Use the lengths from the table above to complete the table of ratios. (Use "alpha>f1>4" to enter fractions on the calculator)

	$\frac{A'''B''''}{AB}$	$\frac{B''''C''''}{BC}$	$\frac{C''''D''''}{CD}$	$\frac{D''''E''''}{DE}$	$\frac{E''''A''''}{EA}$
Ratio of side lengths					
Ratio as a decimal (to the nearest hundredth)					

(2) What do you notice about the ratios as decimals? How does the ratio as a decimal connect to the graph? (Look at it)

(3) Use the lengths from the table above to complete the table of ratios.

	$\frac{A''B''}{A''''B''''}$	$\frac{B''C''}{B''''C''''}$	$\frac{C''D''}{C''''D''''}$	$\frac{D''E''}{D''''E''''}$	$\frac{E''A''}{E''''A''''}$
Ratio of side lengths					
Ratio as a decimal (to the nearest hundredth)					

(4) What do you notice about the ratios as decimals? How does the ratio as a decimal connect to the graph? (Look at it)

(5) Write a general statement about the ratios of corresponding sides of similar shapes.

7.2

□ (6) For each pair of similar figures complete each proportion with a ratio that is equivalent. You may use how the drawing looks to determine corresponding sides. (longest to longest, shortest to shortest, etc.)

□ (7) For each pair of similar figures, write 2 correct proportions. You may use how the drawing looks to determine corresponding sides. You may also highlight or use shapes like the example to show corresponding sides.

$$\frac{ED}{QP} = \frac{DC}{PO}$$

$$\frac{AB}{MN} = \frac{EA}{QM}$$

___ = ___
___ = ___

___ = ___
___ = ___

___ = ___
___ = ___

___ = ___
___ = ___

___ = ___
___ = ___

___ = ___
___ = ___

___ = ___
___ = ___

___ = ___
___ = ___

___ = ___
___ = ___

□ (8) Summarize what we know about similar figures (use the terms corresponding, angles, sides, ratio, proportion, congruent):
