

**LEARNING  
OUTCOMES**

- I can determine whether the solution of a quadratic equation will be real or complex.
- I can find real solutions to quadratic equations in one variable using multiple methods and justify my solution method.

Name \_\_\_\_\_

**Lesson 13/15: Using the Quadratic Formula and Interpreting the Discriminant****WARM UP:**

Identify the coefficients of the terms in each of the following quadratic equations.

1.  $x^2 + 7x + 10 = 0$

2.  $3x^2 - 18x = 12$

3.  $(x + 12)(x - 4) = 0$

4.  $x^2 - 8x + 9 = -11$

take note**Key Concept The Quadratic Formula**

To solve the quadratic equation  $ax^2 + bx + c = 0$ , use the **Quadratic Formula**.

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

1. Solve  $x^2 + 2x - 8 = 0$  using the quadratic formula.

2. Solve  $x^2 + 4 = 4x$  using the quadratic formula.

3. Solve  $3x^2 - 10x + 5 = 0$

**Exercises 1–5:** Solve the following equations using the quadratic formula:

1.  $x^2 - 2x + 1 = 0$

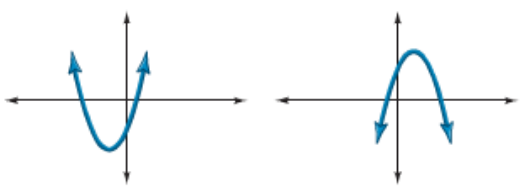

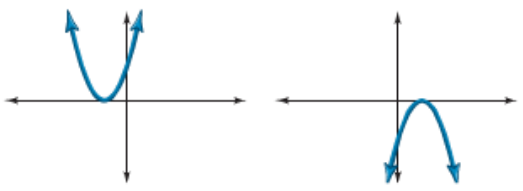

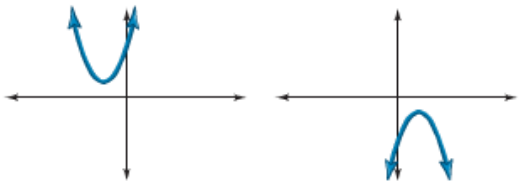

2.  $3b^2 + 4b + 8 = 0$

3.  $2t^2 + 7t - 4 = 0$

4.  $q^2 - 2q - 1 = 0$

5.  $m^2 - 4 = 3$

# The Discriminant and the Nature of the Roots of Quadratic Equations

Discriminants and Solutions of Quadratic Equations		
Value of the Discriminant	Number of Solutions for $ax^2 + bx + c = 0$	x-intercepts of Graph of Related Function $y = ax^2 + bx + c$
$b^2 - 4ac > 0$ perfect square → rational not perfect square → irrational	two real solutions	two x-intercepts 
$b^2 - 4ac = 0$	one real solution	one x-intercept 
$b^2 - 4ac < 0$	no real solutions	no x-intercepts 

1. The roots of the equation  $9x^2 + 3x - 4 = 0$  are

- 1) imaginary
- 2) real, rational, and equal
- 3) real, rational, and unequal
- 4) real, irrational, and unequal

2. Which number is the discriminant of a quadratic equation whose roots are real, unequal, and irrational?
- 1) 0
  - 2)  $-5$
  - 3) 7
  - 4) 4

3. Use the discriminant to determine all values of  $k$  that would result in the equation

$$x^2 - kx + 4 = 0 \text{ having equal roots (only one solution).}$$

For Exercises 4–7, without solving, determine the number of real solutions for each quadratic equation:

4.  $p^2 + 7p + 33 = 8 - 3p$

5.  $7x^2 + 2x + 5 = 0$

6.  $2y^2 + 10y = y^2 + 4y - 3$

7.  $4z^2 + 9 = -4z$

8. State whether the discriminant of each quadratic equation is positive, negative, or equal to zero on the line below the graph.

Identify which graph above matches the discriminants below:

Discriminant A:  
 $(-2)^2 - 4(1)(2)$

Discriminant B:  
 $(-4)^2 - 4(-1)(-4)$

Discriminant C:  
 $(-4)^2 - 4(1)(0)$

Discriminant D:  
 $(-8)^2 - 4(-1)(-13)$

## Lesson 13/15: Using the Quadratic Formula and Interpreting the Discriminant

Without solving, determine the number of real solutions for each quadratic equation.

1.  $b^2 - 4b + 3 = 0$

2.  $2n^2 + 7 = -4n + 5$

3.

4.

5.

6.
