

**UNIT OVERVIEW**

| STAGE ONE: Identify Desired Results |  |  |  |
|-------------------------------------|--|--|--|
| Established Goals/Standards         | G.CO.1   | <b>Long-Term Transfer Goal</b>   |  |
|                                     | G.CO.9   | <i>At the end of this unit, students will use what they have learned to independently...</i>   |  |
|                                     | G.CO.10  | Use proportional relationships and similarity to solve problems involving angles and distance.   |  |
|                                     | <b>Meaning</b>   |  |  |
|                                     | G.SRT.1  | <b>Enduring Understandings</b><br><i>Scholars will understand that...</i>  | <b>Essential Questions</b><br><i>Scholars will consider such questions as...</i>   |
|                                     | G.SRT.2  | In similar figures all corresponding pairs of angles are congruent and all corresponding pairs of sides are proportional.  | What is the relationship between similarity and size transformations?  |
|                                     | G.SRT.3  |  |  |
|                                     | G.SRT.4  | By similarity, side ratios in right triangles are properties of the angles in the triangle,  | How can deductive arguments be used to show similarity of two figures?   |
|                                     | G.SRT.5  | leading to definitions of trigonometric ratios for acute angles.   | What are the special properties of similar triangles and how do these properties lead to the definition of the trigonometric ratios? |
|                                     | G.SRT.6  | The sine and cosine of complementary angles are equal.   |  |
| G.SRT.7                             |  |  |  |
| G.SRT.8                             | Trigonometric ratios and the Pythagorean Theorem can be used to solve right triangles in applied problems.   |  |  |
| G.MG.1                              | Geometric shapes, their measures, and their properties can be used to describe objects.  |  |  |
| <b>Acquisition</b>                  |  |  |  |
|                                     | <i>What knowledge will students learn as part of this unit?</i>  | <i>What skills will students learn as part of this unit?</i>   |  |
|                                     | Similarity and congruence,<br>Similarity and triangles,<br>Similarity and right triangle trigonometry,<br>Similarity and proportionality,<br>Angle sum formulas for polygons,<br>Triangle inequality and extension to other polygons,<br>Angles relationships in parallel lines cut by a transversal,<br>Vertical angles and angle sums in polygons,<br>Solving problems using similarity<br>Solving problems using right triangle trigonometry,<br>Similarity proofs,<br>Radian measure | Justify whether two figures are similar or congruent<br><br>Use justify angle relationships created by intersecting and parallel lines<br><br>Reason deductively to justify a conclusion or to create a counterexample<br><br>Apply trigonometric relationships to determine side lengths and angle measures of right triangles. |  |

|          |        |         |        |

|----------|--------|---------|--------|

| STAGE TWO: Determine Acceptable Evidence   |   |
|--|---|
|  | Assessment Evidence   |
| <p>Criteria to assess understanding: <i>(This is used to build the scoring tool.)</i></p> <p>Development of two plans: detail, use of vocabulary, variety of plans.</p> <p>Justification for why the plans will work using appropriate math terminology.</p> <p>Evidence of carrying out a plan with accuracy.</p> | <p>Performance Task focused on Transfer:</p> <p>Out of Class task:<br/>           Building Measurement: Find something in your neighborhood that is too tall for you to measure directly. For example, you might choose the height of your roof or the height of a tree.</p> <p>a. Describe in detail two ways you could find the height of this object indirectly. Use ideas you learned in this unit. Be sure to explain why your methods work.</p> <p>b. Carry out one of your plans. Give the specific measurements you make directly. Show how you use those measurements to find the object's height.</p> |
|  | <p>Other Assessment Evidence:</p> <p>Students will complete an in-class assessment comprised of "The Ladder" problem and a flashlight problem along with examples of Regents Exam questions based upon Similarity and Trigonometry.</p>   |

|          |        |         |        |

| T, M, A<br>(Code for Transfer,<br>Meaning Making and<br>Acquisition) | STAGE THREE: Plan Learning Experiences  |  |
|--|---|--|
| M  | Learning Events:<br><b>What is a Shadow?</b><br>- Day 1 Mobile Puzzles (group work intro) | Evidence of learning:<br><i>(formative assessment)</i><br>-Discussion of usefulness of mobile activity |
| M  | - How Long is a Shadow?   | -Scholar responses to 3 prompts “What is a Shadow?” and group responses to Defining Variables          |
| M  | - Day 2 Experimenting with Shadows  | -Exit Ticket: scholar responses to how variables impact shadow length.                                 |
| M  | - The Shadow Model  | -Scholars share shadow model diagrams.   |
| A  | -Day 3 An N-by-N Window   | -Scholars will discuss patterns and formulas discovered.   |
| M  | - Shadow Data Gathering   | -Groups will present charts representing findings from experiments                                     |
| M  | -Day 4 Working with Shadow Data   | -Groups present relationships between variables  |
| A  | <b>The Shape of It,</b><br>Pattern Block Investigations                                   | -Scholars record measurements on interior angles of traced pattern blocks                              |
| M  | -Day 5 (Finish Pattern Block Investigation)<br>- Degree Discovery                         |  |
| M  | - Polygon Angles  | -Complete table of polygon angles  |

|--|---|---|

- Day 14
  
- Day 15 Very Special Triangles
- Angle Observations
  
- Day 16 More About Angles
- Inside Similarity
- Fit Them Together (page 102)
- Parallel Proof
- Day 17 Angles, Angles, Angles
  
- The Lamp Shadow,**
- Day 18 Bouncing Light
- Now You See It, Now You Don't
- Day 19 Mirror Magic
- Mirror Madness
- Day 20 A Shadow of a Doubt
- To Measure a Tree
- Day 21 More Triangles for Shadows
  
- The Sun Shadow,**
- Day 22 Introduction and Sun Shadow Problem
- Right Triangle Ratios
- Sin, Cos, and Tan Revealed
- Homemade Trig Tables
- Day 23 Your Opposite is My Adjacent
- The Tree and the Pendulum
- Exactly One-Half (page 104)
- Eye Exam and Lookout Point (page 105)
- Sparky and the Dude
- Pole Cat
- Day 24 A Bright, Sunny Day
- Fit Them Together
- Day 25 Similar Areas
