

**Mathematics Transfer Goals:**

I will become a productive citizen, a consumer of information, and will make sound decisions for success in life.

- Think purposefully using mathematical reasoning to analyze and model new problem situations.
- Make sense of and be tenacious in solving real world problems, seeking out and using appropriate tools and resources.
- Communicate mathematical ideas clearly, constructing viable arguments and using precise mathematical language
- Collaborate confidently and respectfully toward a common goal, advocating for all team members to have a voice.

| Unit 1:<br>Overland<br>Trail | Understandings  | Focus Questions   | Summative Assessment        | Tasks (Specific problems mapped to understandings and what to highlight/modify)   | Classroom (Formative) Assessments   | Time     | Reflection |
|------------------------------|---|---|-----------------------------|---|---|----------|------------|
|                              | 1. SWUT patterns can be used to make sense of the world around us.  | 1. How are the values in an input/output table related?<br>2. How does the input determine the output or the output determine the input?<br>3. How can you use patterns to generate a mathematical model? | A: 2b<br>M: 2a, 2d, 6<br>T: | 1. What's Next (pp. 3-4)<br>2. Inside Out (p. 10)<br>3. Pulling Out Rules (p. 12)<br>4. <b>Extending Work with In-Out Tables (Genie Packet)</b><br>5. Diagonals Illuminated (pp. 105-106, nice but not needed)<br>6. Another Way to Look at Patterns (Genie Packet)<br>7. Arithmetic Sequences (Genie Packet)   | - Extending Work with In-Out Tables   | 12 weeks |            |
|                              | 2. SWUT the same linear relationship can be represented using tables, graphs, equations, and verbal descriptions. | 1. How can the multiple representations of linear functions be used to solve problems?<br>2. How do you use technology to explore the relationships between equations, tables, and graphs?                | A: 3a, 3e<br>M: 2e<br>T: 1  | 1. Extending Work with In-Out Tables (Genie Packet)<br>2. Another Way to Look at Patterns (Genie Packet)<br>3. To Kearny by Equation (pp. 33-34)<br>4. The Vermillion Crossing (p. 35)<br>5. Wagon Train Sketches and Situations (pp. 42-44)<br>6. Graph Sketches (p. 45, nice but not needed)<br>7. In Need of Numbers (pp. 46-47)<br>8. The Issues Involved (p. 48)<br>9. Out Numbered (pp. 49-50)<br>10. From Rules to Graphs (p. 51)<br>11. Other Types of Rules and Graphs Worksheet on Piecewise Functions (Genie Packet)<br>12. A Special Type of Piecewise Functions Worksheet on Step Functions (Genie Packet)<br>13. Previous Travelers (pp. 54-56)<br>14. The Basic Student Budget (pp. 60-61)<br>15. <b>Following Families on the Trail (pp. 62-63)</b><br>16. Rules for Families on the Trail (Genie Worksheet)<br>17. Graphing Calculator In-Outs (pp. 64-65)<br>18. More Graphing Calculator In-Outs (Genie Worksheet)<br>19. Mystery Graph (p. 121) | - All Five, One – Linear Functions<br>- Following Families on the Trail (Question 2)<br>- Straight-Line Reflections |          |            |
