# Unit 3 - The Periodic Table

**\*STUDENT\***

## VOCABULARY:

Ionization energy  
Electronegativity  
Atomic Radius  
Ionic Radius  
Chemical Reactivity  
Metallic Character  
Nonmetallic character  
Metals  
Metalloids  
Nonmetals

Metalloids  
Alkali metals  
Alkaline Earth metals  
Halogens  
Noble Gases  
Transition metals  
Periodic  
Periodic Law  
Periods  
Groups

Octet  
States of matter  
Solids  
Liquids  
Gases  
Diatomic elements  
Allotrope  
Isoelectronic  
Families

# Chemical Periodicity/History of the Table:

- **Dmitri Mendeleev (Russia)**

- 1<sup>st</sup> chemist to arrange newly found elements into a table form/usable manner
- Elements arranged according to \_\_\_\_\_
- Resulted in \_\_\_\_\_ or periodic intervals being \_\_\_\_\_

I	II	III	IV	V	VI	VII	VIII		
H 1.01									
Li 6.94	Be 9.01	B 10.8	C 12.0	N 14.0	O 16.0	F 19.0			
Na 23.0	Mg 24.3	Al 27.0	Si 28.1	P 31.0	S 32.1	Cl 35.5			
K 39.1	Ca 40.1		Ti 47.9	V 50.9	Cr 52.0	Mn 54.9	Fe 55.9	Co 58.9	Ni 58.7
Cu 63.5	Zn 65.4			As 74.9	Se 79.0	Br 79.9			
Rb 85.5	Sr 87.6	Y 88.9	Zr 91.2	Nb 92.9	Mo 95.9		Ru 101	Rh 103	Pd 106
Ag 108	Cd 112	In 115	Sn 119	Sb 122	Te 128	I 127			
Ce 133	Ba 137	La 139		Ta 181	W 184		Os 194	Ir 192	Pt 195
Au 197	Hg 201	Tl 204	Pb 207	Bi 209					
			Th 232		U 238				

- **\*Henry Moseley (England)**

[http://en.wikipedia.org/wiki/Henry\\_Moseley](http://en.wikipedia.org/wiki/Henry_Moseley)

- Used X-ray spectra to prove the existence of the \_\_\_\_\_
- Arranged table by \_\_\_\_\_ (or # of protons) which proved to be much more effective
- How the modern day periodic table is arranged
- No more gaps!

■ hydrogen      ■ poor metals  
■ alkali metals      □ nonmetals  
■ alkali earth metals      ■ noble gases  
■ transition metals      ■ rare earth metals

**Periodic Law** = elements in periodic table are \_\_\_\_\_ functions of their \_\_\_\_\_

- 1) As you move across a **ROW** or **PERIOD**, you add **1 PROTON** to the nucleus, and **1 ELECTRON** to the **VALENCE SHELL**
- 2) The **MAXIMUM** number of **VALENCE ELECTRONS** any element can have is **EIGHT**, therefore any element with 8 valence electrons marks the **END** of a **ROW** or **PERIOD**. The next element will be the first of a new row and will restart the pattern with **1 VALENCE ELECTRON**.

*\*Think of the way Sunday marks the start of a new row on a calendar and restarts the weekly pattern.*

- 3) The number of **VALENCE ELECTRONS** dictates the number of **BONDS** an atom of an element can form
- 4) The number of **BONDS** an element can form dictates that element's **CHEMICAL PROPERTIES**
- 5) As you move down a **GROUP** or **COLUMN**, you add **1 PRINCIPAL ENERGY LEVEL** or **ELECTRON SHELL**
- 6) All elements in the **SAME COLUMN** or **GROUP** have the **SAME NUMBER OF VALENCE ELECTRONS**, therefore elements in the **SAME COLUMN** or group tend to have **SIMILAR CHEMICAL PROPERTIES**.

*\*Think of how you feel on every Monday or every Friday. That pattern repeats itself in weekly periods.*

# Arrangement of the Periodic Table:

The Periodic Table is made up of PERIODS and GROUPS:

- **PERIODS** = \_\_\_\_\_ (run left to right)

19 K	20 Ca	21 Sc	22 Ti	23 V	24 Cr	25 Mn	26 Fe	27 Co	28 Ni	29 Cu	30 Zn	31 Ga	32 Ge	33 As	34 Se	35 Br	36 Kr
---------	----------	----------	----------	---------	----------	----------	----------	----------	----------	----------	----------	----------	----------	----------	----------	----------	----------

Element Symbol	Element Name	Group #	Electron configuration	Lewis diagram
K				
Ca				
Ga				
Ge				
As				
Se				
Br				
Kr				

\*OCTET = full \_\_\_\_\_ (8 electrons, except for \_\_\_\_\_ elements, for whom \_\_\_\_\_ marks a full valence shell)

Remember... \_\_\_\_\_

- **GROUPS =** \_\_\_\_\_ (run up & down)

Use the Periodic Table in your CRT's to complete the table below for the Group I elements pictured next to it:

	Element Name	Electron configuration	Lewis diagram
<sup>1</sup> H			
<sup>3</sup> Li			
<sup>11</sup> Na			
<sup>19</sup> K			
<sup>37</sup> Rb			
<sup>55</sup> Cs			
<sup>87</sup> Fr			

**PRACTICE:**

1. Mendeleev arranged the original periodic table according to what? What was the problem with this arrangement?

\_\_\_\_\_

2. Henry Mosely proved the existence of what subatomic particle? How did he then arrange the periodic table?

\_\_\_\_\_

3. How many electrons does the last element in every row or period have in its valence shell? \_\_\_\_\_

4. What happens to the number of energy levels as you move across a period? \_\_\_\_\_

5. What happens to the number of energy levels as you move down a group? \_\_\_\_\_

6. The chemical properties of an element are based on what?

\_\_\_\_\_

7. Periods are similar to what on a calendar? \_\_\_\_\_

8. Groups are similar to what on a calendar? \_\_\_\_\_

9. Use the calendar analogy to explain whether it's more likely to find similar characteristics among elements in the same group or elements in the same period.

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

10. What happens to the number of valence electrons as you move across a period? \_\_\_\_\_

11. What happens to the number of valence electrons as you move down a group? \_\_\_\_\_

12. Use the concept of valence electrons to explain whether it's more likely to find similar characteristics among elements in the same group or elements in the same period.

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

# The Groups (a more in-depth look...)

## Group 1 → ALKALI METALS (FAMILY)

<http://www.youtube.com/watch?v=uixxJtJPVXk>

- All have \_\_\_ valence electron
- Easily \_\_\_\_\_ their one electron to become \_\_\_ ions
- \_\_\_\_\_ reactive → never found alone in nature
- Contains the \_\_\_\_\_ reactive metal: Probably \_\_\_\_\_, but it's so rare, we've got to go w/ \_\_\_\_\_

## Group 2 → ALKALINE EARTH METALS (FAMILY)

<http://www.youtube.com/watch?v=DFQPnHkQIZM>

- All have \_\_\_ valence electrons
- Prefer to \_\_\_\_\_ their two electrons to become \_\_\_ ions
- \_\_\_\_\_ reactive → never found alone in nature

## Groups 3-12 → TRANSITION METALS

- Found in the \_\_\_\_\_ of the periodic table (the D block)
- Form \_\_\_\_\_ in solution (ex: Cu is bright blue when dissolved in water)
  - This concept is **ALWAYS** on the **REGENTS EXAM!!!**
- Tend to be \_\_\_\_\_ → will lose electrons or gain them depending on what other \_\_\_\_\_ are present
- \_\_\_\_\_ reactive group of metals

## Groups 13-16 → BCNO groups (not a single group)

- \_\_\_\_\_ groups
- Metals, nonmetals, & metalloids found along the staircase (many different properties)

Group 17 → HALOGENS (FAMILY)

- \_\_\_ valence electrons
- Like to gain \_\_\_ electron to become ions with \_\_\_ charge  
(Remember, \_\_\_\_\_)
- Form \_\_\_\_\_ called \_\_\_\_\_
- Contains the most \_\_\_\_\_ nonmetal: \_\_\_\_\_
- All \_\_\_\_\_ making up the group
- Three states of matter found in group: \_\_\_\_\_  
\_\_\_\_\_
- Ex: \_\_\_\_\_

Group 18 → NOBLE GASES (FAMILY)

- \_\_\_\_\_ or \_\_\_\_\_
- Have \_\_\_\_\_ (\_\_\_ e- in valence shell/outer energy level)
- Most \_\_\_\_\_ group; exist \_\_\_\_\_ in nature
- Exception to the \_\_\_\_\_ is \_\_\_\_\_ (only has \_\_\_ valence e-)
- EVERYONE WANTS TO BE A NOBLE GAS & HAVE 8 ELECTRONS! 8 IS GREAT!
- Ex: \_\_\_\_\_

Hydrogen → Not officially part of a group

- Both a \_\_\_\_\_ and a \_\_\_\_\_
- Can be seen as \_\_\_\_\_

The Lanthanide/Actinide Series - two rows on bottom of table (detached) - Elements 58 - 71 & 90 - 103

- Actually belong to the \_\_\_\_\_

**PRACTICE:**

1. Which of the groups are considered families? Give the group numbers and the names of the families. \_\_\_\_\_  
\_\_\_\_\_
2. Which group contains elements that do not typically react with other elements? Give the group number and the name. \_\_\_\_\_  
\_\_\_\_\_
3. Explain why elements in the group named above is not reactive. \_\_\_\_\_  
\_\_\_\_\_
4. Which group contains the most active metals? Give the group number and the name. \_\_\_\_\_
5. Which group contains the most active nonmetals? Give the group number and the name. \_\_\_\_\_
6. Which element is part of Group I, but is not an Alkali Metal? \_\_\_\_\_  
\_\_\_\_\_
7. Which groups form colored ions in solution? Give both the group numbers and the name. \_\_\_\_\_
8. Which group contains the second most active metals? Give both the group number and the name. \_\_\_\_\_
9. Which groups contain the most unpredictable metals? Give both the group numbers and the name. \_\_\_\_\_

# The Periodic Table can be "KEYED" for many things

## The Staircase →

Periodic Table of the Elements

Legend:

- hydrogen
- alkali metals
- alkali earth metals
- transition metals
- poor metals
- nonmetals
- noble gases
- rare earth metals

### 1. metals:

- make up \_\_\_\_\_ of table
- \_\_\_\_\_ of or \_\_\_\_\_ "staircase"—except \_\_\_\_\_
- all \_\_\_\_\_ (except \_\_\_\_\_)
- Must have \_\_\_\_\_ properties of a metal:
  1. \_\_\_\_\_ (can be hammered/molded into sheets)
  2. \_\_\_\_\_ (can be drawn/pulled into wire)
  3. have \_\_\_\_\_ (are shiny when polished)
  4. good \_\_\_\_\_ (allow heat & electricity to flow through them)
    - due to "sea of \_\_\_\_\_ valence electrons"
- like to \_\_\_\_\_ to form \_\_\_\_\_ ions

### 2. nonmetals:

- \_\_\_\_\_ of or \_\_\_\_\_ staircase
- mostly \_\_\_\_\_ and \_\_\_\_\_ @ STP—except \_\_\_\_\_
- \_\_\_\_\_ malleable/ductile; \_\_\_\_\_ (shatter easily)
- \_\_\_\_\_ luster (\_\_\_\_\_)
- \_\_\_\_\_ or \_\_\_\_\_ conductors
- like to \_\_\_\_\_ to form \_\_\_\_\_ ions
- May have \_\_\_\_\_ or \_\_\_\_\_ properties of a metal

### 3. metalloids (AKA semi-metals):

- Have \_\_\_\_\_ properties of a metal
- \_\_\_\_\_ staircase (between \_\_\_\_\_ & \_\_\_\_\_ (except \_\_\_\_\_))

Periodic Table of the Elements

## PRACTICE

1. Which type of element is located below or to the left of the staircase? What is the exception?  

---

2. Which type of element is located above or to the right of the staircase?  

---

3. Which type of element is located on the staircase? What are the exceptions?  

---

4. Which of the following is NOT a property of a metal?

- |                       |                    |
|-----------------------|--------------------|
| a.) Shiny; has luster | d.) Brittle        |
| b.) Malleable         | e.) Good conductor |
| c.) Ductile           |                    |

5. A sample of an element is shiny, is a good electrical conductor, and does not shatter when hit with a hammer. What type of element is it? (Circle one)

METAL/NONMETAL/METALLOID

6. A sample of an element is dull, does not conduct electricity, and shatters upon being hit with a hammer. What type of element is it? (Circle one)

METAL/NONMETAL/METALLOID

7. A sample of an element is shiny, does conduct electricity, and shatters upon being hit with a hammer. What type of element is it? (Circle one)

METAL/NONMETAL/METALLOID

8. What do metals have that allows them to conduct heat and electricity so well?  

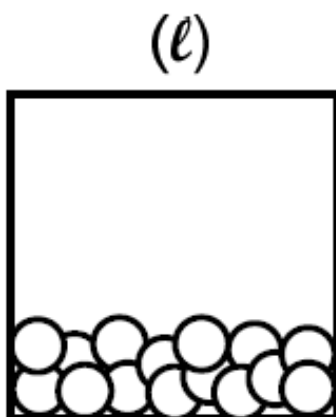

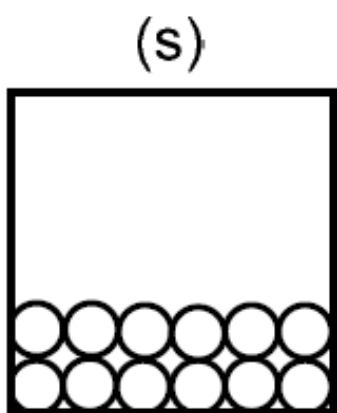

---

# STATES OF MATTER (at STP)

Table A  
Standard Temperature and Pressure

Name	Value	Unit
Standard Pressure	101.3 kPa 1 atm	kilopascal atmosphere
Standard Temperature	273 K 0°C	kelvin degree Celsius

- solids(s)** - most elements are solids at STP; ex: \_\_\_\_\_
  - Definite \_\_\_\_\_
  - Definite \_\_\_\_\_
- liquids (l)** - only TWO elements at STP (Br & Hg); ex: \_\_\_\_\_
  - Definite \_\_\_\_\_
  - Takes the \_\_\_\_\_ of the container
- gases (g)** - H, N, O, F, Cl, & all of group 18 (noble gases); ex: \_\_\_\_\_
  - No definite \_\_\_\_\_
  - \_\_\_\_\_ their container

# Diatomic Elements (7UP) - "Siamese Twins"

- Elements that are \_\_\_\_\_ in nature
- \_\_\_\_\_ in order to fill their \_\_\_\_\_
  - Both need the same number of electrons to fill valence shell
  - Perfect sharing
  - Look at Lewis structure for 2 oxygen atoms:

- Contain 2 \_\_\_\_\_ atoms
- 7 of them—must memorize! Use 7-UP trick (see below)
- Include the following elements:
  - \_\_\_\_\_ (make the shape of a \_\_\_\_\_)
  - \_\_\_\_\_

**Periodic Table of the Elements**

GROUP IA												VIII																																
1	H											2	He																															
GROUP IIA												III B	IV B	VB	VIB	VII B	10																											
2	Li	Be											5	B	6	C	7	N	8	O	9	F	Ne																					
3	11	Na	12	Mg											13	Al	14	Si	15	P	16	S	17	Cl	18	Ar																		
PERIOD	4	19	K	20	Ca	21	Sc	22	Ti	23	V	24	Cr	25	Mn	26	Fe	27	Co	28	Ni	29	Cu	30	Zn	31	Ga	32	Ge	33	As	34	Se	35	Br	36	Kr							
	5	37	Rb	38	Sr	39	Y	40	Zr	41	Nb	42	Mo	43	Tc	44	Ru	45	Rh	46	Pd	47	Ag	48	Cd	49	In	50	Sn	51	Sb	52	Te	53	I	54	Xe							
6	55	Cs	56	Ba											72	Hf	73	Ta	74	W	75	Re	76	Os	77	Ir	78	Pt	79	Au	80	Hg	81	Tl	82	Pb	83	Bi	84	Po	85	At	86	Rn

		57	La	58	Ce	59	Pr	60	Nd	61	Pm	62	Sm	63	Eu	64	Gd	65	Tb	66	Dy	67	Ho	68	Er	69	Tm	70	Yb	71	Lu													
		89	Ac	90	Th	91	Pa	92	U	93	Np	94	Pu	95	Am	96	Cm	97	Bk	98	Cf	99	Es	100	Fm	101	Md	102	No	103	Lr													

**Allotrope** = 1 of 2 or more different \_\_\_\_\_ of an element (nonmetal) in the same \_\_\_\_\_, but with different \_\_\_\_\_ and different \_\_\_\_\_ properties

Ex: allotropes of oxygen → \_\_\_\_\_ vs. \_\_\_\_\_

Ex: allotropes of carbon → \_\_\_\_\_ (in pencils) vs. \_\_\_\_\_

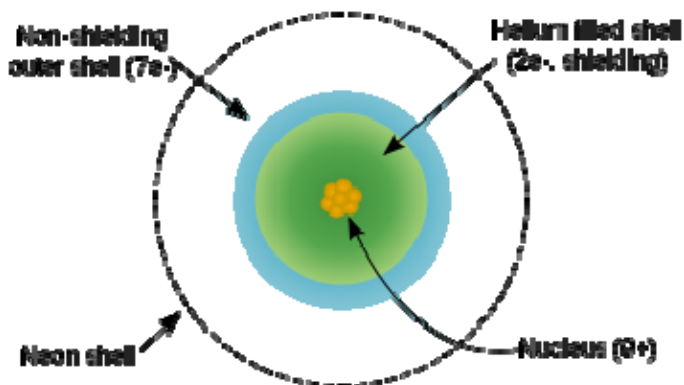

## PRACTICE

1. Which phase of matter has the *most* definite shape?  
\_\_\_\_\_
2. Which phase of matter has the *least* definite shape?  
\_\_\_\_\_
3. The *volume* of which phase of matter changes based on the volume of its container?  
\_\_\_\_\_
4. The *shape* of which phase changes based on its container?  
\_\_\_\_\_
5. Give the chemical symbol for each of the diatomic elements.  
\_\_\_\_\_
6. Why can't any of the diatomic elements exist alone or unpaired?  
\_\_\_\_\_
7. Why is it beneficial for one atom of a diatomic element to pair up with another atom of that same element?  
\_\_\_\_\_

# WHY the Periodic Table is PERIODIC...

As you move \_\_\_\_\_

1. \_\_\_\_\_
  - a. Additional proton (massive and +) wins the tug-of-war with additional electron (tiny and -)
  - b. Pulls the electron cloud in more tightly (*magnet/cart demo*)
2. \_\_\_\_\_
  - a. Kernel electrons interfere with attraction between the protons in the nucleus and the valence electrons
  - b. Every element in the same period/row has the same number of kernel electrons.

## Chlorine

**+17 Actual nuclear charge**

**-10 Inner shell electrons**

**+7 Effective nuclear charge**

As you move \_\_\_\_\_

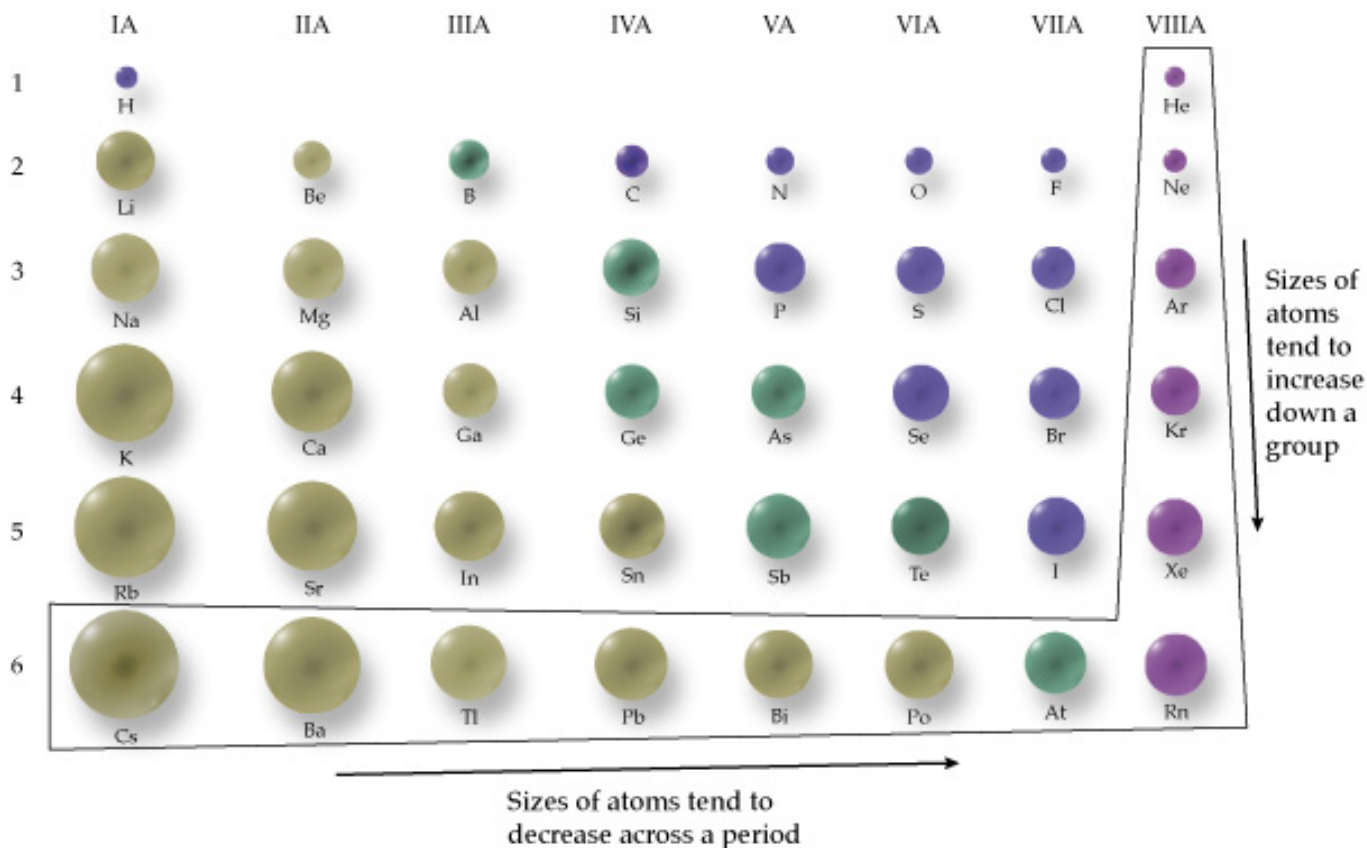

1. \_\_\_\_\_...BUT...
2. \_\_\_\_\_
  - a. Additional orbital/energy level means more kernel electrons (-) to interfere with the attraction between the protons (+) and the valence electrons (-)
  - b. Valence electrons able to drift farther from the nucleus

**\*\*\*IF SHIELDING INCREASES, THAT TRUMPS EVERYTHING\*\*\***

# The Periodic Trends

1. **Atomic Radius** =  $\frac{1}{2}$  the distance between neighboring nuclei of a given element

Relative Atomic Sizes of the Representative Elements

Copyright © 2000 Benjamin/Cummings, an imprint of Addison Wesley Longman, Inc.

## Going down a group, atomic radius **INCREASES**

- **Reasons:**
  - Adding \_\_\_\_\_ to the outside of the atom take up \_\_\_\_\_

## Going across a period, atomic radius **DECREASES**

- **Reasons:**
  - \_\_\_\_\_ is \_\_\_\_\_
  - Same # of energy levels, no increase in shielding

### \*\*\*Ionic Radius\*\*\* (Just like atomic radius, but for ions)

- \_\_\_\_\_ → \_\_\_\_\_
  - Reason: \_\_\_\_\_ pulling on \_\_\_\_\_
    - Electrons outnumber Protons
    - Electrons drift farther away from nucleus
- \_\_\_\_\_ → \_\_\_\_\_
  - Reason: \_\_\_\_\_ pulling on \_\_\_\_\_
    - Protons outnumber Electrons
    - Electrons pulled closer to nucleus

\*\*\*Isoelectronic Series\*\*\*: atoms and ions that have the \_\_\_\_\_ number of \_\_\_\_\_

- Elements gain or lose electrons in order to attain the electron configuration of the nearest noble gas
- All members of an ISOELECTRONIC SERIES have the same NOBLE GAS CONFIGURATION

Ex:  $N^{3-}$ ,  $O^{2-}$ ,  $F^{-}$ ,  $Na^{+}$ , and  $Mg^{2+}$

- all have \_\_\_\_\_ electrons
- all have the same electron configuration as the noble gas \_\_\_\_\_

Click on the link below to see an excellent animation/tutorial on Atomic Radius, Ionic Radius, and Isoelectronic Series

<http://www.mhhe.com/physsci/chemistry/essentialchemistry/flash/atomic4.swf>

**PRACTICE:**

1. Shielding increases as the number of \_\_\_\_\_ increases.
2. Who wins the "tug of war" between protons and electrons and why? \_\_\_\_\_
3. What happens to atomic radius as you move across a period (from left to right)? \_\_\_\_\_
4. Explain your answer to #2 in terms of nuclear charge and number of principal energy levels.  
\_\_\_\_\_  
\_\_\_\_\_

5. What happens to atomic radius as you move down a group?  
\_\_\_\_\_
6. Explain your answer to #4 in terms of nuclear charge and number of principal energy levels.  
\_\_\_\_\_  
\_\_\_\_\_

7. Is the ionic radius of a metal larger or smaller than its atomic radius? \_\_\_\_\_
8. Explain your answer to #6 in terms of protons and electrons.  
\_\_\_\_\_

9. Is the ionic radius of a nonmetal larger or smaller than its atomic radius? \_\_\_\_\_
10. Explain your answer to #8 in terms of protons and electrons.  
\_\_\_\_\_

11. Which ion has the same electron configuration as an atom of He?  
a.  $\text{Ca}^{2+}$                       b.  $\text{H}^-$                       c.  $\text{O}^{2-}$                       d.  $\text{Na}^+$
12. Which of the following does not have a noble gas configuration?  
a. Ar                      b.  $\text{Na}^+$                       c.  $\text{Mg}^{2+}$                       d. S

## 2. Electronegativity:

- \_\_\_\_\_ to \_\_\_\_\_
- \_\_\_\_\_ of an atom/ion for  $e^-$  like \_\_\_\_\_

→ \_\_\_\_\_ to achieve full \_\_\_\_\_ → \_\_\_\_\_

→ \_\_\_\_\_ to achieve full \_\_\_\_\_ → \_\_\_\_\_

- Values range from \_\_\_\_\_ (Table S in CRT)
  - \_\_\_\_\_ electronegative element = \_\_\_\_\_
  - \_\_\_\_\_ electronegative elements = \_\_\_\_\_  
or \_\_\_\_\_

Going \_\_\_\_\_, electronegativity \_\_\_\_\_

### • Reasons:

- \_\_\_\_\_
- \_\_\_\_\_ does \_\_\_\_\_

Electronegativity of the Period 3 Elements

Going \_\_\_\_\_, electronegativity \_\_\_\_\_

### • Reasons:

- \_\_\_\_\_

3. **Ionization Energy** = amount of ENERGY needed to REMOVE the most loosely bound  $e^-$  from an atom/ion (in the GAS phase) (values for each element listed in Table S)

( \_\_\_\_\_ with electrons, like \_\_\_\_\_ )

Going across a period, ionization energy \_\_\_\_\_

• Reasons:

- \_\_\_\_\_
- \_\_\_\_\_ does \_\_\_\_\_

Going down a group, ionization energy \_\_\_\_\_

• Reason:

4. **Reactivity** = \_\_\_\_\_ or \_\_\_\_\_ of an element to go through a \_\_\_\_\_ change (or \_\_\_\_\_ with another element)

\* \_\_\_\_\_ are \_\_\_\_\_, when it comes to electrons

\*\* \_\_\_\_\_ are \_\_\_\_\_, when it comes to electrons

**\*\*\*CAN'T COMPARE METALS TO NONMETALS!!!**

(Sorry for all the negative electron terminology...Get it?)

**METALS**: (recall: the most reactive metal is \_\_\_\_\_)

- **Going across a period**, reactivity \_\_\_\_\_
  - **Reasons:**
    - \_\_\_\_\_
    - \_\_\_\_\_ does \_\_\_\_\_
- **Going down a group**, reactivity \_\_\_\_\_
  - **Reason:**
    - \_\_\_\_\_

Click on the link below to see an **AWESOME** video of Group I Metals reacting in water...

[http://www.youtube.com/watch?feature=player\\_embedded&v=uixxJtJPVXk&safe=active](http://www.youtube.com/watch?feature=player_embedded&v=uixxJtJPVXk&safe=active)

**NONMETALS**: (recall: the most reactive nonmetal is \_\_\_\_\_)

- **Going across a period**, reactivity \_\_\_\_\_ (until you get to the \_\_\_\_\_ → unreactive)
  - **Reasons:**
    - \_\_\_\_\_
    - \_\_\_\_\_ does \_\_\_\_\_
- **Going down a group**, reactivity \_\_\_\_\_
  - **Reason:**
    - \_\_\_\_\_

## *You should now be able to...*

- ✓ Describe the origin of the periodic table
- ✓ State the modern periodic law
- ✓ "Key" the periodic table according to metals vs. nonmetals and all 3 phases
- ✓ Explain how an element's electron configuration is related to the element's placement within a period and a group on the periodic table'
- ✓ Identify and state the properties of the following groups in the periodic table:
  - ❖ Alkali metals
  - ❖ Alkaline earth metals
  - ❖ Halogens
  - ❖ Noble Gases
  - ❖ Transition metals
- ✓ State the trends of the following properties within periods and groups of elements including:
  - ❖ Ionization energy
  - ❖ Electronegativity
  - ❖ Atomic Radius
  - ❖ Chemical Reactivity
  - ❖ Metallic/Nonmetallic character
