

Cashman's Corner – Room 204

School #39

Forms and Supplies

Thank You, Thank You, Thank You!! Most forms have been completed and returned to school! I appreciate your time and effort to complete these!! I also appreciate the supplies that you sent in!! They will be used to help the students be more organized and successful with their learning!

Encompass – After School

Our after school program is about to begin. Please consider signing your child up for this wonderful program!!

BEHAVIOR

The students have been doing a good job being respectful and responsible and safe. One area of concern that I have is the amount of talking that the students are doing!! Please remind them to raise their hand to speak and to listen when instruction is being given.

5-Week Reports

Students will be receiving 5 week reports in October. This will contain information about how your child is doing and their testing information.

Specials

A-day: Art/Library

B-day: PE

C-day: Music

D-day: PE

Art and Library will switch every 10 weeks.

Curriculum Updates

Reading – Listening and Learning

Students have been working on our first domain of Fairy Tales and Tall Tales. Students are learning about how to answer questions about the characters, the plot and the setting. Our next domain will be Early Asian Civilizations. Students will be focusing on listening to a passage and then responding to the questions.

Skills

The skills domain started with a review of basic code spellings for a-z. In the upcoming weeks students will be learning about tricky words, spellings for double letters, past tense, and working with two syllable words. Spellings lists have started and will be coming directly from the skills domain.

Math

Our first module in math is a review of adding and subtracting to 100. Students have been using the knowledge they received last year to apply and review this year. In our next module students will be working on measurement using centimeters, and meter sticks. They will then apply that skills to one and two step addition and subtraction problems.

Science

Students will be learning about weather. They will learn about the tools to measure weather, the water cycle, and clouds.

Social Studies

Students are learning about what a citizen is, and how to be a good citizen. We will be exploring government and how we elect officials. In addition, they will be exploring cause and effect in regards to rules and laws.
